

Bedside care

TripleCare

treating through telemedicine™

Bringing doctors to your
bedside after hours

Treat in place

Because the majority of nursing facilities don't have a doctor onsite after hours, patients are sent to the ER for care. This delays treatment and causes unnecessary stress. TripleCare is the solution, providing after-hours care from a doctor, without the need to leave the comfort of your own bed.

Our doctors use video technology and digital diagnostic tools to treat you in place at your bedside. This means doing away with an ambulance ride and an uncomfortable hospital stay. Instead, you get excellent care from a doctor + nurse team when and where it's needed most.

Bedside care, after hours

Our board-certified doctors come to your bedside, providing face-to-face medical care in an instant. And TripleCare doesn't replace your existing doctors – we help support their care when you need it most.

TripleCare offers:

- Immediate treatment, without the need to wait for your doctor or travel to the ER.
- Seamless care, thanks to communication between your nurse, your existing doctor and our care team.
- An expert team of doctors who specialize in senior care.
- The latest in medical technology, to provide you with the best possible care.

Highly skilled, personalized care from a doctor + nurse team is how we help you or your loved one in a time of need. It's how we bring care to you... or as we like to say, **treat in place.**

How TripleCare works:

TripleCare's doctors know how to handle complicated medical situations and are trained in using state-of-the-art technology to deliver your care.

Using our special equipment, a doctor can virtually connect with your nurse to evaluate, diagnose and treat you.

1

The nurse recognizes you are in need.

2

The nurse calls TripleCare.

3

You, the nurse and the doctor talk face to face.

It's that simple — all it takes is a moment's notice to receive quality care when your regular doctor is not available onsite. And this care is brought to you at no additional cost.
